

# AssetLink

Manage your oil analysis sampling right from your handheld device

AssetLink from Eurofins TestOil allows you to simplify the collection and management of fluid samples and increase collection efficiency through routes. Simply scan a QR code on both the asset and the bottle, linking the sample to your DataSight online portal.

Eliminate the time-consuming manual label process

## AssetLink Features

AssetLink allows you to manage asset information easily and accurately with QR codes. Link to DataSight-managed Routes to ensure assets are sampled according to their proper schedule. Manage multiple plants, areas, routes, and assets. The Search function allows you to find assets by machine ID, asset name and more.

### List of Features

- **Link sample to asset** using QR coded sample label
- **Input sample information** including hours, observations, etc.
- **Update asset information**
- **Add new asset** to equipment database
- **Store images of asset**
- **Link asset to QR coded tag** or 1D bar code
- **Utilize Routes** to organize and audit assets

- **Determine user access levels** through your program administrator
- **Tag GPS location** for equipment assets
- **View PDF sample results** from your DataSight online portal account
- **View assets based on last sampled date**
- **Generate Job Report** with sampling summary and observations
- **Reference Sample Dashboard** for quick overview
